

Mini Headphone Amp & Splitter

No.: 35507

Description

- Easily improve the sound quality of your portable devices
- Compact, portable amplifier with dual headphone outputs
- Intelligent power switch turns power on/off on audio signal detection
- USB 2.0 Micro-B for charging
- 2 year warranty

This lightweight dual amplifier has been specifically designed to improve the overall sound quality and volume of portable music players such as MP3 players, smartphones, tablets etc. It features a built in bass booster that adds extra power and depth to your audio.

You can enjoy up to 12 hours of continuous playback thanks to an intelligent power switch that conserves charge by turning off the amp when no audio signal is detected. Output is also amplified 120% meaning your device doesn't need to use as much power to play audio and you can drive larger, more powerful headphones.

A second 3.5mm stereo port also means you can easily share your audio by plugging in an additional set of headphones. The compact form factor - comparable in size to the 6th generation iPod nano - also has an integrated cable management design allowing you to conveniently store your headphone cable when not in use.

Note: 2 hours charging gives a full battery and 12 hours playback, 30 minutes gives a fast charge with 4 hours playback (approx.)

Package Contents:

Mini Headphone Amp & Splitter

1 x 15cm 3.5mm audio cable

1 x 23cm USB 2.0 Type A to Micro-B charging cable

Technical details

- 100dB high fidelity SNR sound
- Built-in 120mAh rechargeable Li-Poly battery
- Integrated cable management design
- Low Distortion: < 0.1% (85 mW)
- Output: 50mW

- 1 x 3.5mm stereo input
- 2 x 3.5mm stereo outputs
- For use with 16 - 150 ohms impedance earphones
- Blue Power LED / Orange Charging LED
- Weight: 15.5g
- Dimensions: 38 x 38 x 12 mm
