LAN Network Cable Tester for RJ-45, RJ-11 & RJ-12
No.: 43008

Description

- Quickly test network cables for wiring continuity, open, shorts and mis-wires
- Separate Remote Tester for pre-installed cables
- Status LED for each individual wire
- Complete with Soft Carry Case
- 2 year warranty

The LINDY Network Cable Tester is a compact, palm sized unit for testing network cables.

It can be used to read and check the pin-out configuration before and after installation.

A separate passive module is included for remote testing of pre-installed cables. A single switch starts the automatic cable test, indicating the pin-to-pin configuration and quickly highlights any underlying problems by using the LED display.

It also features an "S" mode that allows the pinout information readout to be slower.

Technical details

- Requires 9V PP3 battery (not included)
- Tests Unshielded and Shielded network cables
- Suitable for CAT5, CAT5e, CAT6, and CAT7
- Connections for RJ-45, RJ-11 and RJ-12
